Contents

Part I Black Holes and their Properties

1 What Exactly is the Information Paradox? 3
S.D. Mathur
1.1 Introduction 3
1.2 Puzzles with Black Holes 4
1.2.1 The Entropy Puzzle 4
1.2.2 The Information Paradox 5
1.2.3 The Plan of the Review 7
1.3 Particle Creation in Curved Space 7
1.3.1 Particle Creation: Physical Picture 10
1.3.2 Particle Production in Black Holes 13
1.4 Slicing the Black Hole Geometry 15
1.4.1 The Wavemodes 18
1.5 The Evolution of Modes in the Black Hole 20
1.5.1 The Coordinate Map Giving the Expansion 22
1.5.2 Detailed Nature of the Wavemode 25
1.5.3 Wavepackets 27
1.5.4 Modes Straddling the Horizon 28
1.5.5 The Nature of the Created Pairs 30
1.5.6 The Entangled Nature of $|\psi\rangle$ 32
1.5.7 Entanglement and the Idea of 'Mixed States' 32
1.5.8 Entropy of the Hawking Radiation 33
1.5.9 The Problem with the Entangled State 34
1.6 Common Misconceptions About Information Loss 35
1.6.1 Is the Emitted Radiation Exactly Thermal? 35
1.6.2 Can Small Quantum Gravity Effects Encode Information in the Radiation? 36
1.6.3 What Is the Difference Between Hawking Radiation and Radiation from a Burning Piece of Coal? 37
1.7 The Hawking 'Theorem' 39

1.7.1 The Local Vacuum 40
1.7.2 The Consequences of Conditions (a) and (b) 40
1.7.3 The Consequence of a Non-unique Vacuum 41
1.7.4 Summary of the Information Paradox 42
1.8 Black Holes in String Theory: Fuzzballs 42
1.9 Conclusion 47
References 47

2 Classical Yang–Mills Black Hole Hair in Anti-de Sitter Space 49
E. Winstanley
2.1 Introduction 49
2.1.1 The "no-hair" Conjecture 49
2.1.2 Hairy Black Holes 50
2.1.3 Scope of this Article 51
2.2 $\mathfrak{su}(N)$ Einstein–Yang–Mills Theory 52
2.2.1 Ansatz, Field Equations and Boundary Conditions 52
2.2.2 Some "trivial" Solutions 55
2.2.3 Dyonic Field Equations 57
2.2.4 Perturbation Equations 58
2.3 Asymptotically Flat/de Sitter Solutions for $\mathfrak{su}(N)$ EYM 60
2.3.1 Asymptotically Flat, Spherically Symmetric $\mathfrak{su}(2)$ Solutions 60
2.3.2 Non-spherically Symmetric, Asymptotically Flat $\mathfrak{su}(2)$ Solutions 62
2.3.3 Asymptotically Flat $\mathfrak{su}(N)$ Solutions 63
2.3.4 Asymptotically de Sitter $\mathfrak{su}(2)$ EYM Solutions 64
2.4 Asymptotically anti-de Sitter Solutions for $\mathfrak{su}(2)$ EYM 64
2.4.1 Spherically Symmetric, Asymptotically adS, $\mathfrak{su}(2)$ EYM Solutions 64
2.4.2 Stability of the Spherically Symmetric Solutions 68
2.4.3 Other Asymptotically Anti-de Sitter $\mathfrak{su}(2)$ EYM Solutions 70
2.5 Asymptotically Anti-de Sitter Solutions for $\mathfrak{su}(N)$ EYM 71
2.5.1 Spherically Symmetric Numerical Solutions 71
2.5.2 Analytic Work 75
2.5.3 Stability Analysis of the Spherically Symmetric Solutions 77
2.6 Summary and Outlook 79
References 81

3 Black Hole Thermodynamics and Statistical Mechanics 89
S. Carlip
3.1 Introduction 89
3.2 Black Hole Thermodynamics 90
3.2.1 Entropy and the Second Law 90
3.2.2 The Four Laws of Black Hole Mechanics 91
3.2.3 Black Holes Radiate 92
3.2.4 Can Hawking Radiation Be Observed? 94

3.2.5 The Many Derivations of Hawking Radiation 95
3.3 Black Hole Statistical Mechanics 103
3.3.1 The Many Faces of Black Hole Statistical Mechanics ... 104
3.4 The Problem of Universality 110
3.4.1 The Cardy formula 111
3.4.2 Horizons and Constraints 112
3.4.3 What Are the States? 114
3.5 Open Questions 115
3.5.1 The Information Loss Paradox 116
3.5.2 Holography 116
Appendix 117
References 119

4 Colliding Black Holes and Gravitational Waves 125
U. Sperhake
4.1 Introduction 125
4.2 The 3+1 Decomposition of General Relativity 127
4.2.1 The Einstein Equations 129
4.3 The Ingredients of Numerical Relativity 134
4.3.1 The Formulation of the Einstein Equations 134
4.3.2 Gauge Conditions 138
4.3.3 Initial Data 141
4.3.4 Mesh Refinement and Outer Boundary Conditions 144
4.3.5 Singularity Treatment 147
4.4 Diagnostics 148
4.4.1 Global Quantities 149
4.4.2 Local Quantities 149
4.4.3 Gravitational Waves 151
4.5 A Brief History of Black-Hole Simulations 153
4.6 Properties of Black-Hole Binaries 154
4.6.1 Non-spinning, Equal-Mass Binaries 155
4.6.2 Unequal Mass Binaries 158
4.6.3 Spinning Binaries 161
4.7 Conclusions 164
References 164

5 Numerical Simulations of Black Hole Formation 177
N. Stergioulas
5.1 Introduction 177
5.2 Numerical Methods 182
5.2.1 Evolution of the Field Equations 183
5.2.2 Evolution of the Equations of Hydrodynamics 185
5.2.3 Hydrodynamical Excision 186
5.2.4 General-Relativistic Hydrodynamics 187
5.2.5 Mesh Refinement 188
5.2.6 Mode Extraction 188

5.3 Black Hole Formation in Rotating Neutron Star Collapse 189
5.3.1 Dynamics of the Matter 191
5.3.2 Dynamics of the Horizons 195
5.4 Black Hole Formation Through Non-axisymmetric Instabilities in Supermassive Stars 197
5.4.1 Quasi-toroidal Polytropes 197
5.4.2 Numerical Setup 198
5.4.3 Dynamical Evolution of the Reference Model 199
5.4.4 Models of $\Gamma = 4/3$ Polytropes with Fixed Central Rest-Mass Density 202
5.4.5 Nature of the Non-axisymmetric, Dynamical Instability . 204
References 205

Part II Higher-Dimensional Black Holes

6 Black Holes in Higher-Dimensional Gravity 211
N.A. Obers
6.1 Introduction and Motivation 211
6.2 Uniqueness Theorems and Going Beyond Four Dimensions 214
6.2.1 Black Hole (Non-)uniqueness 214
6.2.2 Overview of Solution Methods 217
6.3 Kaluza–Klein Black Holes 218
6.3.1 Setup and Physical Quantities 219
6.3.2 Black Holes and Strings on Cylinders 221
6.3.3 Phase Diagram and Copied Phases 225
6.3.4 KK Phases on $\mathbb{T}^2$ from Phases on S^1 226
6.4 Multi-black Hole Configurations on the Cylinder 229
6.4.1 Construction of Multi-black Hole Solutions 229
6.4.2 Newtonian Derivation of the Thermodynamics 233
6.4.3 Consequences for the Phase Diagram 235
6.5 Thin Black Rings in Higher Dimensions 237
6.5.1 Thin Black Rings from Boosted Black Strings 237
6.5.2 Matched Asymptotic Expansion 241
6.5.3 Black Rings Versus MP Black Holes 243
6.6 Completing the Phase Diagram 246
6.6.1 GL Instability of Ultra-spinning MP Black Hole 246
6.6.2 Phase Diagram of Neutral Rotating Black Holes on $\mathscr{M}^{\mathrm{D}}$ 248
6.7 Outlook 250
6.7.1 Stability 251
6.7.2 Other Compactified Solutions 251
6.7.3 Numerical Solutions 251
6.7.4 Effective Field Theory Techniques 251
6.7.5 Other Black Rings 252
6.7.6 More Rotation Parameters 252

6.7.7 Blackfolds . . . 252
6.7.8 Plasma Balls and Rings . . . 252
6.7.9 Microscopic Entropy for Three-Charge Black Holes . . . 253
6.7.10 Braneworld Black Holes . . . 253
References . . . 253

7 Braneworld Black Holes . . . 259
R. Gregory
7.1 Introduction . . . 259
7.2 Some Randall–Sundrum Essentials . . . 261
7.3 Gravity in the Randall–Sundrum Model . . . 263
7.3.1 Perturbation Theory . . . 264
7.3.2 Cosmology . . . 268
7.4 Black Holes and Holography . . . 270
7.5 Black Hole Metric . . . 273
7.6 Approximate Methods and Solutions for Brane Black Holes . . . 277
7.6.1 Brane Approach . . . 277
7.6.2 Bulk Approach . . . 279
7.7 Outlook . . . 291

9 Gravitational Waves from Braneworld Black Holes 347
S.S. Seahra
9.1 Introduction 347
9.2 A Generalized Randall–Sundrum Two Brane Model 349
9.2.1 Geometrical Framework and Notation 350
9.2.2 The Action and Field Equations 351
9.2.3 The Black String Braneworld 352
9.3 Linear Perturbations 353
9.3.1 Perturbative Variables 354
9.3.2 Linearizing the Bulk Field Equations 355
9.3.3 Linearizing the Junction Conditions 356
9.3.4 Converting the Boundary Conditions into Distributional Sources 357
9.4 Kaluza–Klein Mode Functions 358
9.4.1 Separation of Variables 358
9.4.2 Even Parity Eigenfunctions 359
9.4.3 Odd Parity Eigenfunctions 361
9.5 Recovering 4-Dimensional Gravity 362
9.6 Beyond the Zero-Mode Truncation 364
9.6.1 KK Mode Decomposition 364
9.6.2 The Multipole Decomposition 365
9.7 Homogeneous Axial Perturbations 367
9.7.1 High Angular Momentum $l \geq 2$ Radiation 367
9.7.2 Axial p-Waves 369
9.7.3 Numeric Integration of Quadrupole Equations 370
9.8 Spherical Perturbations with Source Terms 371
9.8.1 Spherical Master Variables 372
9.8.2 Inversion Formulae 373
9.8.3 The Gregory–Laflamme Instability 374
9.9 Point Particle Sources on the Brane 376
9.9.1 Point Particle Stress–Energy Tensor 376
9.9.2 The s-Wave Sector 378
9.10 Estimating the Amplitude of the Massive Mode Signal 380
9.10.1 Green's Function Analysis 380
9.10.2 Asymptotic Behaviour 381
9.10.3 Application to the Point Particle Case for $n \gg 1$: Kaluza–Klein Scaling Formulae 382
9.10.4 Observability of the Massive Mode Signal 384
9.11 Summary and Outlook 385
References 386

10 Black Holes at the Large Hadron Collider 387
P. Kanti
10.1 Introduction 387
10.2 Creation of Black Holes and Their Properties 388
